PUNGUZA™ FOR PIPE UNCLOGGING

What is Punguza™?

Punguza for Unclogging Pipes is a natural, safe-to-handle, environmentally beneficial food additive solution that feeds the beneficial bacteria in drain pipes and grease traps. As a result of feeding the beneficial bacteria, they become active. When these "good" bacteria are active, they do not produce bad odours and they eat up the organic solids, especially Fat, Oils and Grease (FOG). By feeding them, we are boosting nature to do what it was designed to do.

Direct Benefits of Punguza™

- Unclogs pipes and drains in kitchens and bathroom sinks and showers for free-flow of grey water.
- Improves grease trap function.
- Eliminates bad odours.
- Reduces flies, mosquitoes and other insects.

Indirect Benefits of Punguza™

- Digests fats, oils and grease in pipes and grease traps without any corrosion or poison.
- Digests organic solids that clog kitchen sinks, bathroom sinks and shower and laundry drains.
- Improves effluent quality, reducing its impact on the environment.
- Safe to handle – safe for people and safe for the environment.
- Improves hygiene and working conditions.

Financial Benefits of Punguza™

- Unclogs drains without expensive plumbing costs.
- Unclogs without corrosion, thus eliminating the cost of replacing pipes.
- Reduces the frequency of emptying the grease trap.
- Improves the Public Health rating of commercial facilities.

How to use Punguza™ 60ml bottle

1. Shake the bottle well before opening.
2. Grease Traps: daily in the evening, pour one bottle of Punguza™ down the sink with the grease trap, followed by one litre of warm water.
3. Clogged kitchen sinks, bathroom sinks or drains: mix 1/3 bottle of Punguza™ (20ml) with one litre of warm water. Pour down the sink at the end of the day. Repeat this for three consecutive days.
4. Results will be noticed after 3 days.
5. Repeat if free-flow is not yet achieved.

Results of Punguza™

You will notice the following results when you use Punguza™ according to the instructions above:

1. Grease trap: after 3-5 days, foul odour will disappear and solids will reduce.
2. Sinks and drains: after 3-5 days, foul odour will disappear and free-flow will improve.

Remember, Punguza™ feeds the beneficial bacteria in the pipes and grease traps which will be starving before using Punguza™. Since this is a natural bacterial digestion process, it is very effective, safe and the results are realized gradually.

If you do not get the desired results, call Revive Solutions for advice. We offer a money-back guarantee on Punguza™. Please make sure you use Punguza™ as per the instructions given.
